

# Water Well Village of Hope Bweyale Uganda Provided by NIKA Water

**"Bringing hope to the helpless"**

Water in Africa is life. Women walk 3-4 miles to get water. They carry 5 gallon jugs on their heads. Most of the water they do get is contaminated with parasites and other bacteria.

Village of Hope Village in Bweyale drilled a 300 meter well to provide pure water to over 200 families in the surrounding community.

This well will also provide water to over 300 "formerly abducted" orphans who will be relocated at the VOH Village in Bweyale.

Women no longer walk miles for water. Disease and parasites are no longer a problem due to this pure water source.

Life has been brought back to this community through the help of NIKA Water.

**"Thank you for bringing clean water to our community," says Vincent, Local leader, "you have saved our lives!"**
